

Open post-doc position

We are looking for enthusiastic postdoctoral researcher for a funded project on modeling CO_2 storage in the deep aquifers of the Negev Desert (Israel).

In the research, we will use state-of-the-art numerical tools to simulate flow & transport of injected CO_2 to evaluate storage capacity, trapping efficiency and related properties.

Minimum Requirements:

- Ph.D. in geosciences (hydrology, geology, soil sciences, environment, etc.)
- Experience in modeling flow & transport in porous media or related fields

Please contact: Dr. Ravid Rosenzweig, The Geological Survey of Israel
